

## **CS 536 Project 4 – Yezhou Cheng, Benny Wysong-Grass**

This project has been implemented as per spec on the webpage. For testing:

- test.cflat should compile correctly with no errors, and produce a file test.out. This file should exactly match the file test.expected
- nameErrors.cflat should parse correctly, but print a number of errors to the terminal. This output should match exactly the file nameErrors.expected. The contents of nameErrors.out should be empty.
